

The Ticontract “success-based cost sharing” pricing model

How it works

1

The shipper chooses the pricing model, creates the RFQ and invites carriers to bid on the tender.

2

Carriers receive the invitation, activate the additional service and accept the pricing model (once), check and edit the RFQ, and bid on the tender.

3

The shipper receives the offers, analyzes the bids and allocates the volume to the carriers.

4

Carriers with winning freight volume accept the allocation. **Ticontract** sends out a bill with the success-based fee directly to the carrier.

How it adds up

<250K

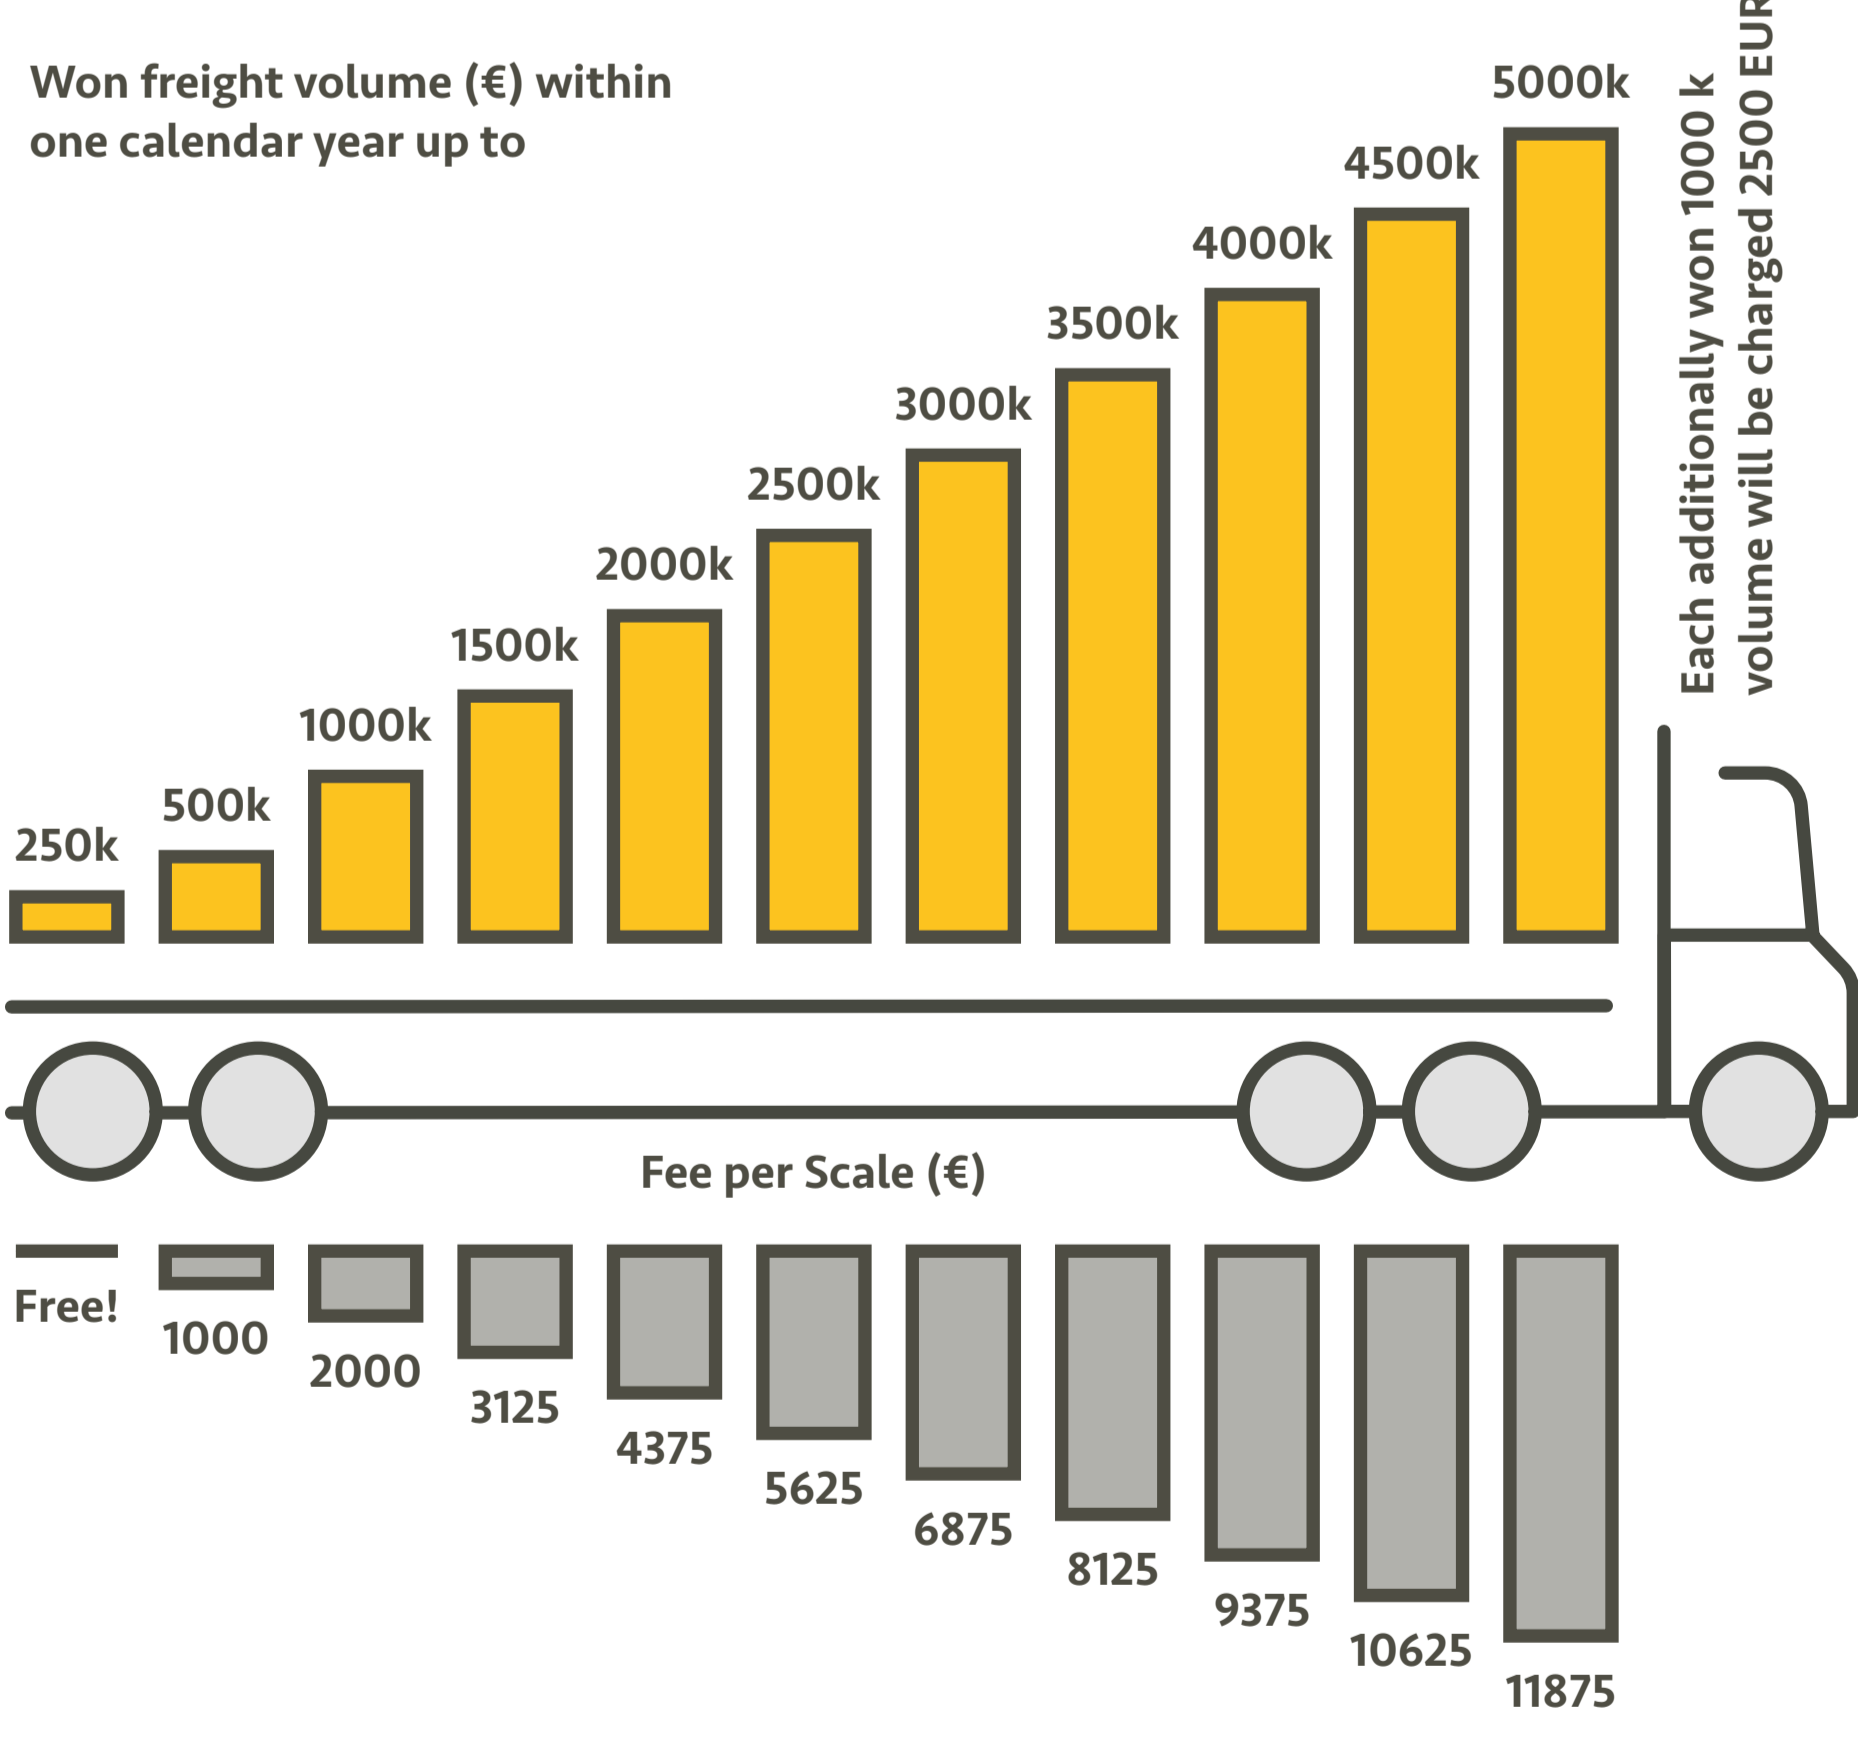

Carrier wins **less than 250 k** EUR volume within one calendar year from one or several shippers:

Free participation!

>250K

Carrier wins **more than 250 k** EUR volume within one calendar year from one or several shippers:

Success-based fee based on allocated volume.

What's in it for you

Up to **30%** less administration

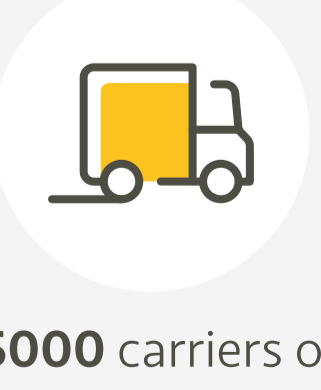

Support in **10** Languages

15000+ RFQ events / year

Up to **19%** cost savings

45000 carriers on the platform
